

Internet Connection Sharing Windows XP

*When this is the PC with
the internet connection*

Step One

Click on 'Start' in taskbar (bottom left hand side), choose 'My Network Places'.

Step Two

Choose Set Up a Home or Small Office Network. In the Welcome Screen (above) click Next

Step Three

Read the Screen then click Next.

Step Four

Make sure to check the correct option as above. Click Next.

Network Setup Wizard

Give this computer a description and name.

Computer description:
Examples: Family Room Computer or Monica's Computer

Computer name:
Examples: FAMILY or MONICA

The current computer name is ANDREWS.

Some Internet Service Providers (ISPs) require that you use a specific computer name. This is often true for computers with a cable modem.

If this is the case for your computer, do not change the computer name provided by your ISP.

Learn more about [computer names and descriptions](#).

< Back Next > Cancel

Step Five

You do not need a description but the Computer Name must be different on each PC on the Network.

Network Setup Wizard

Name your network.

Name your network by specifying a workgroup name below. All computers on your network should have the same workgroup name.

Workgroup name:
Examples: HOME or OFFICE

< Back Next > Cancel

Step Six

You can choose any name you wish here. But all the PC's used on the Network must have the same 'Workgroup Name'.

Step Seven

Click Next.

Step Eight

Check 'Create a Network Setup Disk'. Put an empty Floppy Disk in your Floppy Drive. Click Next

Step Seven

Click Next.

Step Eight

Read the Instructions (this is covered in another tutorial). Click Next

Step Nine

Click Finish.

Step Ten

Click Yes and let the computer reboot.
